

Rockland jeans

The cult jeans for climbers

The challenge

SKYLOTEC has designed a pair of jeans that do more than just look cool – they actually keep you cool while climbing.

These climbing pants provide excellent freedom of movement but also look stylish enough to wear down the café after a hard day's bouldering.

The solution

The jeans' Thermocool fabric has several intelligent functions.

On warmer days, its "cool" fibres provide outstanding moisture transport and enhanced air circulation to create a pleasant wear climate.

On colder days the "thermo" fibres have an insulating function. The thermo-buffering properties keep you warm whilst climbing and protect against overcooling at the end of the day. The fabric is also highly breathable and fast drying.

The Rockland jeans are available in men's and women's versions and look good at the crag, down the wall or around town.

Rockland jeans:

- Weight: 430 g (S)
- Size: Women XS-XL
Men S-XXL
- Material: Thermocool
- Retail price: 89,95 €

Characteristics:

- Perfect wear climate
