

passO carabiner

Safety at the touch of a button

The challenge

Recent years have witnessed continuing developments in carabiner safety closure systems. However, the essential requirements are still easy handling and safe operation that can be relied on in every situation. Previous solutions often failed to fully satisfy climbers' high demands.

The solution

SKYLOTEC took it upon itself to design a carabiner that literally functions at the touch of a button. The patented pinchLock system represents a whole new dimension in safe and easy operation for carabiner closure systems. The gate has two buttons on spring plates which open when pressed simultaneously. When only one button is pressed, the carabiner remains closed. This prevents it from opening accidentally, for example when pushed against a rock face.

The passO is suitable for all types of climbing activities and can be used as an HMS carabiner or with safety equipment. It is designed to be used everywhere where a safe and easy carabiner closure system is required.

passO:

- Weight: 78 g
- Breaking strengths: 22-10-7 kN
- Gate opening: 30 mm
- Dimensions: 112 x 78 mm
- Retail price starts from 10,95 €

Characteristics:

- Quick and easy opening
- Perfect handling
- Durable
- High breaking strength
- Unique design
